

My Bank

The Ultimate Setup Guide

Own Your Data. Track Your Wealth. No Monthly Fees.

Welcome to the Club!

Thank you for choosing **My Bank**. You have just taken control of your financial data.

Unlike other apps that store your data on their servers, **My Bank** runs entirely on your device and saves data to **your private Google Sheet**. This guide will get you set up in less than 10 minutes.

What You Have

1. **The App Bundle (Zip):** Contains the visual interface (`index.html`, icons, etc.).
2. **The Database Link:** Sent to your email (This creates your private Google Sheet).
3. **The Config Tool:** Located on our website (This connects the two).

Part 1: Your Private Database

We have pre-coded the backend for you. You just need to copy it and lock it.

1. **Check your Email:** Look for the "Order Confirmation" email we sent you.
2. **Click the "Master Database Link":**
 - Google will ask: "Would you like to make a copy of My Bank - Master DB?"
 - Click **Make a copy**.
3. **Secure It (Crucial Step):**
 - Inside your new Google Sheet, go to the top menu: **Extensions > Apps Script**.
 - Look at **Line 9**. It will say:

JavaScript

```
const APP_SECRET = 'CHANGE_ME_TO_YOUR_PASSWORD' ;
```

- **Change this text** to a unique password (e.g., MySafeMoney2026!).

-  Write this down. You will need it to log in.
 - Click the **Save icon** .
4. **Deploy:**
- Click the blue **Deploy** button (top right) > **New deployment**.
 - Click the **Gear icon**  > **Web app**.
 - **Execute as:** **Me** (your email).
 - **Who has access:** **Anyone**.
 - Click **Deploy** > **Authorize Access** (Allow permissions).
5. **Copy the URL:**
- Copy the **Web App URL** generated (it ends in **/exec**).

Part 2: Connect the App

No coding required. We built a tool to do this for you.

1. **Unzip the App:** Extract the **MyBank_v2.zip** file you downloaded to a folder on your computer.
2. **Go to our Website:** Visit the **User Guide** section on our site.
3. **Use the Config Generator:**
 - Paste the **Web App URL** (from Part 1) into the generator box.
 - Click **Download config.js**.
4. **Drag & Drop:**
 - Move the downloaded **config.js** file into your unzipped **My Bank folder**.
 - (Replace the existing empty **config.js** file if asked).

Part 3: Go Live

Your app is ready. Now let's put it on your phone.

1. **Host It (Free):**
 - Go to [Netlify Drop](#).
 - Drag your **entire My Bank folder** onto the page.
 - Netlify will give you a secure link (e.g., <https://funny-site-name.netlify.app>).
2. **Install on Phone:**
 - Open that link on your mobile browser.
 - **iOS (iPhone):** Tap Share Button > Scroll down > **Add to Home Screen**.
 - **Android:** Tap Menu (3 dots) > **Install App** or **Add to Home Screen**.

 **Success!** You now have a native-feeling finance app that works offline.

How to Use

Logging In

When you first open the app, you will see a Lock Screen.

1. Enter the **Password** you created in **Part 1** (Step 3).
2. Tap **Unlock**.
3. *Note: The first login requires internet access. After that, you can unlock offline!*

Adding Transactions

- **Income/Expense:** Tap the big buttons to add records.
- **Offline Mode:** If you have no signal, you'll see a **Clock Icon** 🕒. The app saves data locally and auto-syncs when you're back online.
- **Synced:** A **Green Checkmark** ✓ means data is safe in your Google Sheet.

Privacy Mode

Using the app in a coffee shop? Tap the **Eye Icon** 👁️ (top right) to hide your balance numbers (****).

Troubleshooting

Q: Sync status stays Red ("Connection Fail").

- Did you set "Who has access" to "**Anyone**" in Part 1?
- Did you upload the correct `config.js` file to Netlify?

Q: I see "🚫 Wrong Password".

- You must type the exact password you wrote in the Google Apps Script code (`APP_SECRET`).

Q: I updated the code, but nothing changed.

- The app works offline, so it "remembers" the old version.
- **Fix:** Close the app completely (swipe away) and reopen it. You might need to do this twice to force an update.
